

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Project Name

B2B Garment Distribution & Order Management Platform

Platform Type

- Web Application (Admin Panel + Customer Portal)
 - Android Mobile Application
 - REST API Layer
-

1. BUSINESS OBJECTIVE

The objective of this platform is to provide a centralized B2B ordering and distribution management system for garment wholesalers and distributors.

The platform will enable:

- Different categories of distributors, retailers, and customers to place orders.
 - Customer-specific pricing based on customer hierarchy and discount structures.
 - Configurable order approval workflows.
 - Centralized product catalog management.
 - Automatic unit conversion and pricing calculations.
 - Inventory tracking at product and variant level.
 - Monitoring and management of orders, approvals, customer credit limits, and outstanding balances.
-

2. USER ROLES

2.1 Super Admin

The Super Admin will have complete control over the platform.

Permissions

User Management

- Create customers
- Edit customer profiles
- Activate/Deactivate customers
- Assign customer hierarchy levels

Product Management

- Create categories
- Create sub-categories
- Add/Edit/Delete products
- Manage product variants
- Upload product images and videos

Pricing Management

- Configure customer hierarchy levels
- Configure discount percentages for each hierarchy level
- Manage base product pricing

Order Management

- View all orders
- Approve or reject orders
- Manage order workflows

Credit Management

- Set customer credit limits
- Monitor outstanding balances
- Configure order restrictions

Inventory Management

- Update stock manually
- Manage variant-wise inventory

Reporting

- View order reports
 - View customer reports
 - View inventory reports
-

2.2 Distributor / Retailer / Customer

Permissions

Product Access

- Browse products
- View product details
- View applicable pricing

Ordering

- Add products to cart
- Modify cart
- Place orders

Order Tracking

- View order history
- Track order status

Account Information

- View credit limit
 - View outstanding amount
 - View available credit
-

3. CUSTOMER HIERARCHY MANAGEMENT

The system shall support multiple customer levels.

Examples:

- Level 1 Distributor

- Level 2 Distributor
- Level 3 Distributor
- Retailer
- Bulk Buyer

The Super Admin shall be able to:

- Create customer hierarchy levels
 - Edit customer hierarchy levels
 - Assign customers to specific hierarchy levels
 - Configure pricing discounts for each hierarchy level
-

4. PRODUCT MANAGEMENT MODULE

4.1 Product Categorization

The system shall support:

Category

Examples:

- Men's Wear
- Women's Wear
- Kids Wear

Sub Category

Examples:

- Shirts
- T-Shirts
- Jeans
- Jackets

Products

Examples:

- Premium Cotton Shirt
- Casual Denim Jacket

4.2 Product Master

Each product shall contain:

Basic Information

- Product Name
- SKU
- Product Code
- Brand
- Description
- Category
- Sub Category

Tax Information

- HSN Code
- GST Percentage

Media

- Product Images
- Product Videos

Inventory Information

- Stock Quantity
- Product Status (Active / Inactive)

4.3 Product Variant Management

The system shall support dynamic variant creation.

The Super Admin can:

- Create Variant Parameters
- Define Variant Values
- Assign Variants to Products

Examples:

Variant Parameter

Size

Values:

- S
- M
- L
- XL

Variant Parameter

Color

Values:

- Black
- White
- Blue
- Red

Variant Parameter

Fabric

Values:

- Cotton
- Linen
- Polyester

The system shall maintain stock separately for each variant combination.

Example:

Product	Size	Color	Stock
Shirt A	M	Black	120
Shirt A	L	Black	80
Shirt A	M	Blue	60

5. UNIT MANAGEMENT MODULE

Each product shall support up to two units.

Primary Unit

Example:

- Piece

Secondary Unit

Example:

- Pack
 - Bundle
-

Unit Conversion

The Super Admin shall configure conversion ratios.

Examples:

- 1 Pack = 12 Pieces
 - 1 Bundle = 20 Pieces
-

Pricing Logic

Pricing shall automatically calculate based on unit conversion.

Example:

Base Price:

₹500 per Piece

Conversion:

1 Pack = 12 Pieces

Pack Price:
 $\text{₹}500 \times 12 = \text{₹}6,000$

The system shall automatically calculate secondary unit pricing based on the configured conversion ratio.

6. CUSTOMER-SPECIFIC PRICING ENGINE

Base Price

Every product shall have a base price.

Example:

₹500

Discount Matrix

The system shall support hierarchy-based pricing.

Example:

Customer Level	Discount
Level 1 Distributor	30%
Level 2 Distributor	25%
Level 3 Distributor	20%
Retailer	10%

The Super Admin shall be able to:

- Configure discount percentage for each customer level
 - Modify discounts at any time
-

Price Calculation

Formula:

Selling Price = Base Price – Discount

Example:

Base Price = ₹500

Discount = 30%

Selling Price = ₹350

The applicable selling price shall be displayed automatically based on the logged-in customer's hierarchy level.

7. INVENTORY MANAGEMENT

Inventory shall be maintained at:

- Product Level
 - Variant Level
 - Unit Level
-

Stock Information

The system shall maintain:

- Available Stock
-

Stock Updates

Inventory can be updated through:

Manual Update

Admin enters stock manually.

ERP Integration

Inventory synchronization through API integration with Tally or other ERP systems, subject to API availability from the ERP provider.

8. ORDER MANAGEMENT MODULE

Order Creation

Customers shall be able to select:

- Product
- Variant
- Unit
- Quantity

The system shall automatically calculate:

- Product Price
 - Discount
 - GST
 - Total Order Value
-

Order Workflow

Order Statuses:

- Draft
 - Submitted
 - Under Review
 - Pending Approval
 - Approved
 - Rejected
-

Order Approval

Orders shall pass through an approval process before confirmation.

The Super Admin shall be able to:

- Approve orders
 - Reject orders
 - View approval history
-

9. CUSTOMER CREDIT MANAGEMENT

Each customer profile shall contain:

- Credit Limit
 - Outstanding Amount
 - Available Credit
 - Overdue Amount
 - Payment History
-

Order Restriction Modes

Warning Mode

Customer receives warning but can place orders.

Approval Mode

Orders require manual approval.

Blocking Mode

Order placement is blocked when limits are exceeded.

10. CART MANAGEMENT

Customers shall be able to:

- Add products to cart
 - Update quantities
 - Remove products
 - Save cart for later
 - Modify saved cart
 - Convert cart into order
-

11. NOTIFICATION SYSTEM

Notification Channel

WhatsApp Notifications

Notification Triggers

- New Order Created
 - Approval Required
 - Order Approved
 - Order Rejected
 - Order Dispatched
-

12. PAYMENT MODULE

The platform shall operate entirely on a credit-based ordering model.

Payment Method

- Order on Credit

No online payment gateway integration shall be included in the current phase.

Customer credit eligibility shall be controlled through the Credit Management Module.

13. REPORTING MODULE

Order Reports

The system shall provide reports for:

- Pending Orders
- Approved Orders
- Rejected Orders
- Cancelled Orders

Reports shall support:

- Date Range Filters
 - Customer Filters
 - Order Status Filters
-

14. NON-FUNCTIONAL REQUIREMENTS

Security

- Secure Login Authentication
 - Role-Based Access Control
 - Password Encryption
 - Activity Logging
-

Performance

- Support up to 10,000 products
 - Support concurrent order processing
 - Optimized product search and filtering
-

Scalability

The platform architecture shall be scalable to support:

- Additional customer levels
 - ERP integrations
 - Warehouse management
 - Multi-branch operations
 - Advanced reporting modules
-

15. DELIVERABLES

The project shall include:

Admin Panel

- User Management
- Product Management
- Inventory Management
- Pricing Management
- Order Approval Management
- Reports

Customer Portal (Web)

- Product Catalog
- Cart
- Ordering
- Order Tracking
- Account Information

Android Mobile Application

- Product Catalog
- Cart
- Ordering
- Order Tracking
- Notifications

API Layer

- Mobile App APIs
- Future ERP Integration APIs
